Agenda

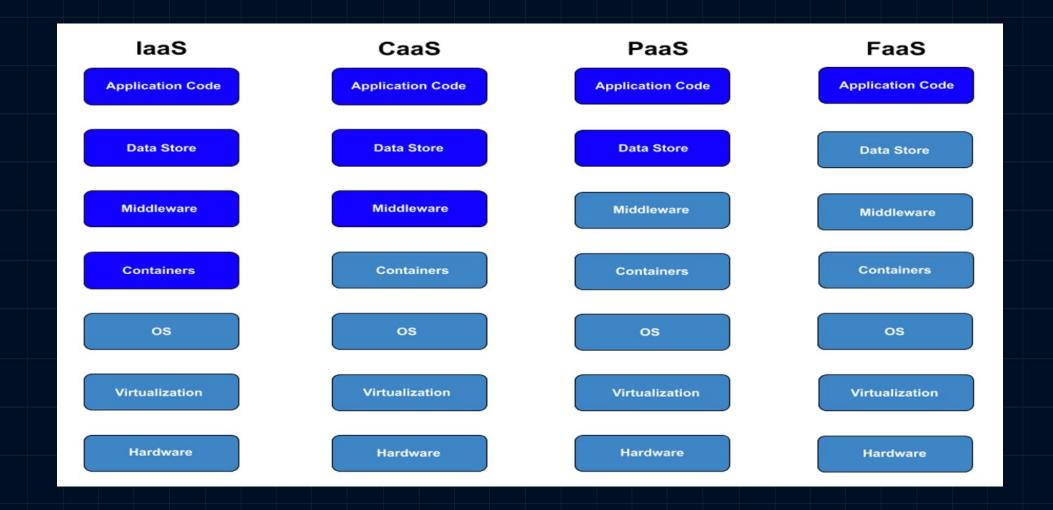

What is FaaS
What is the Problems for FaaS
W-FaaS: New FaaS Based on WASM

What is FaaS

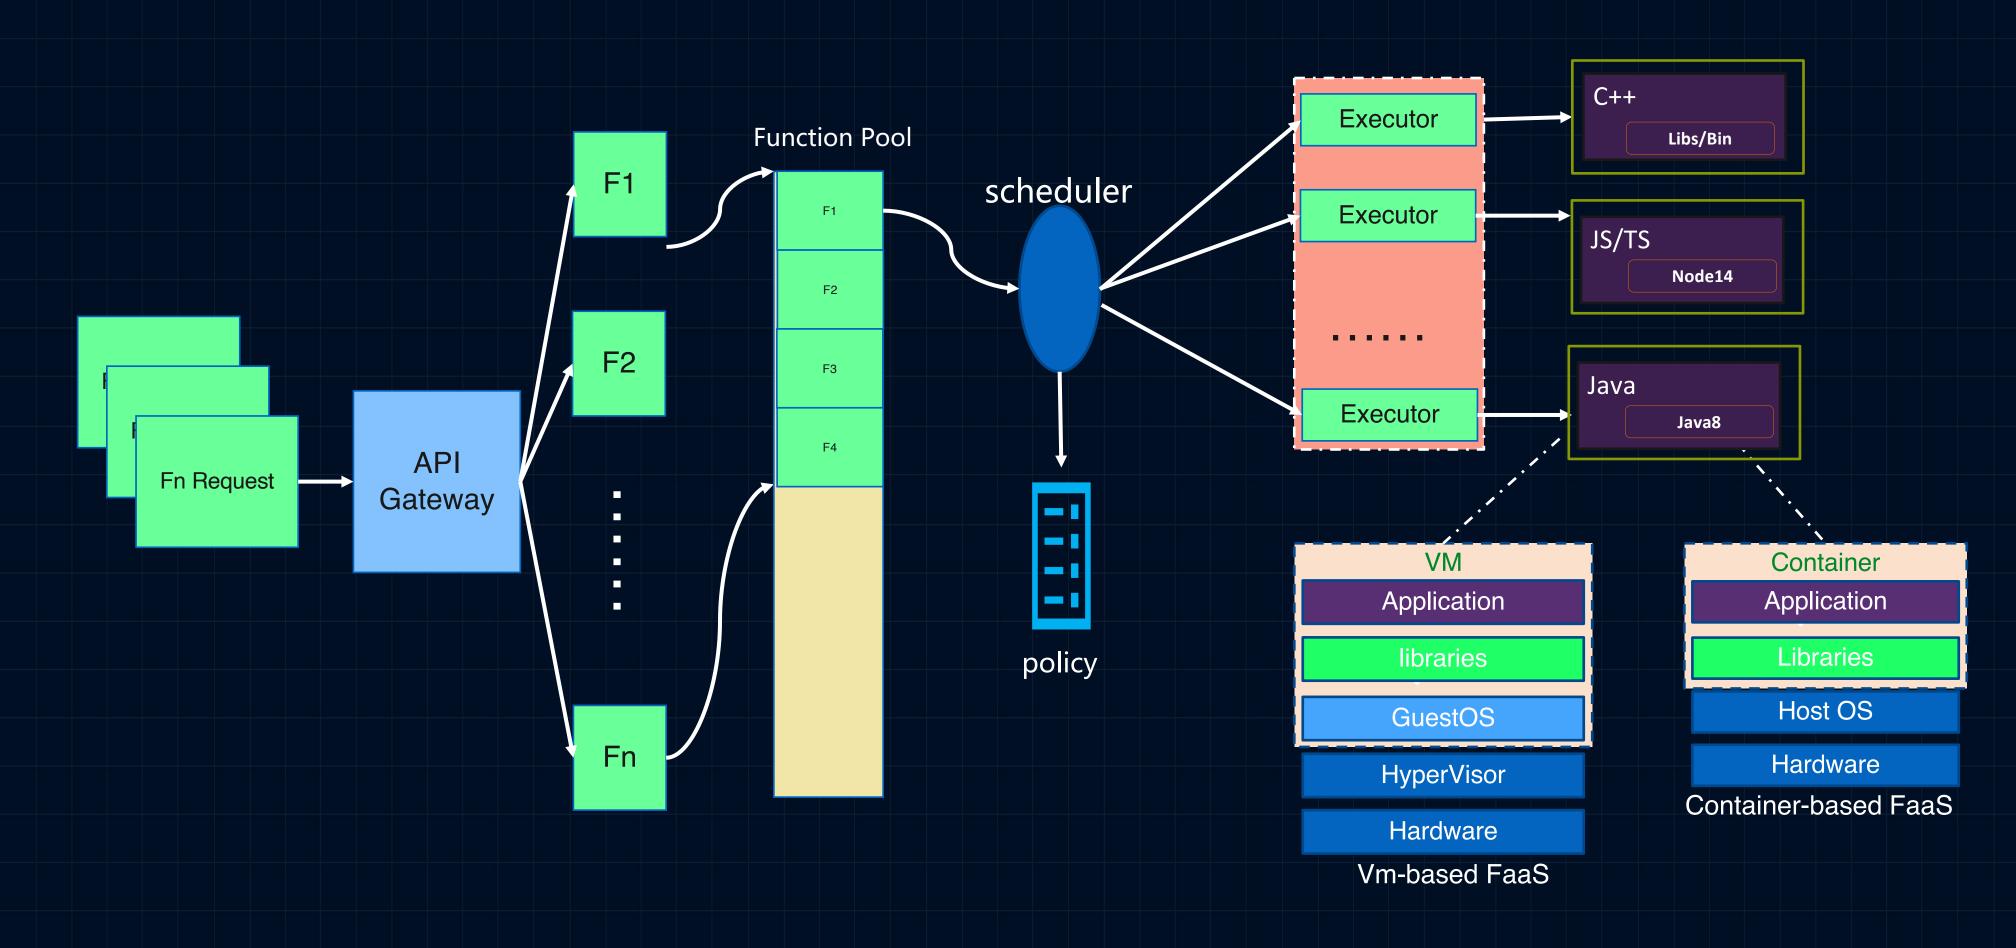

Function as a service (FaaS)

- # 编写 code 和 configuration 文件
- # faascli build
- # faascli deploy
- # curl http://myapp.com/hello
- hello, world from Awesome FaaS App!

Existing FaaS Solution

Problems for Existing FaaS

- ●运行时碎片化
- ●资源消耗大
- ●性能差

Solution: Wasm

WebAssembly(Wasm)

- 一种新的 W3C 标准,由 Google, Mozilla, Microsoft, Apple, Intel 等公司共同开发
- 字节码(语言):
 - 一种低级别语言,可以作为高级别语言的编译目标
 - 一种大小紧凑的,可以用来分发的二进制格式
- 虚拟机(执行):
 - 一种可以被快速解码的,基于栈的虚拟机

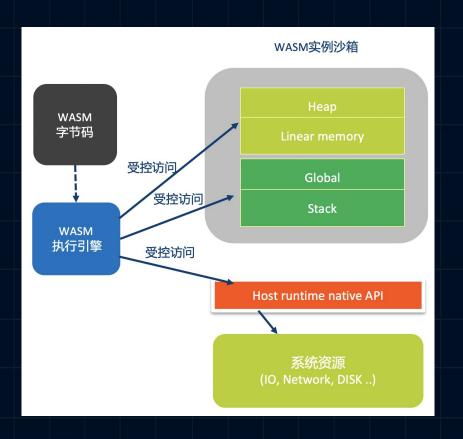

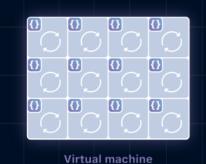

Out of Web

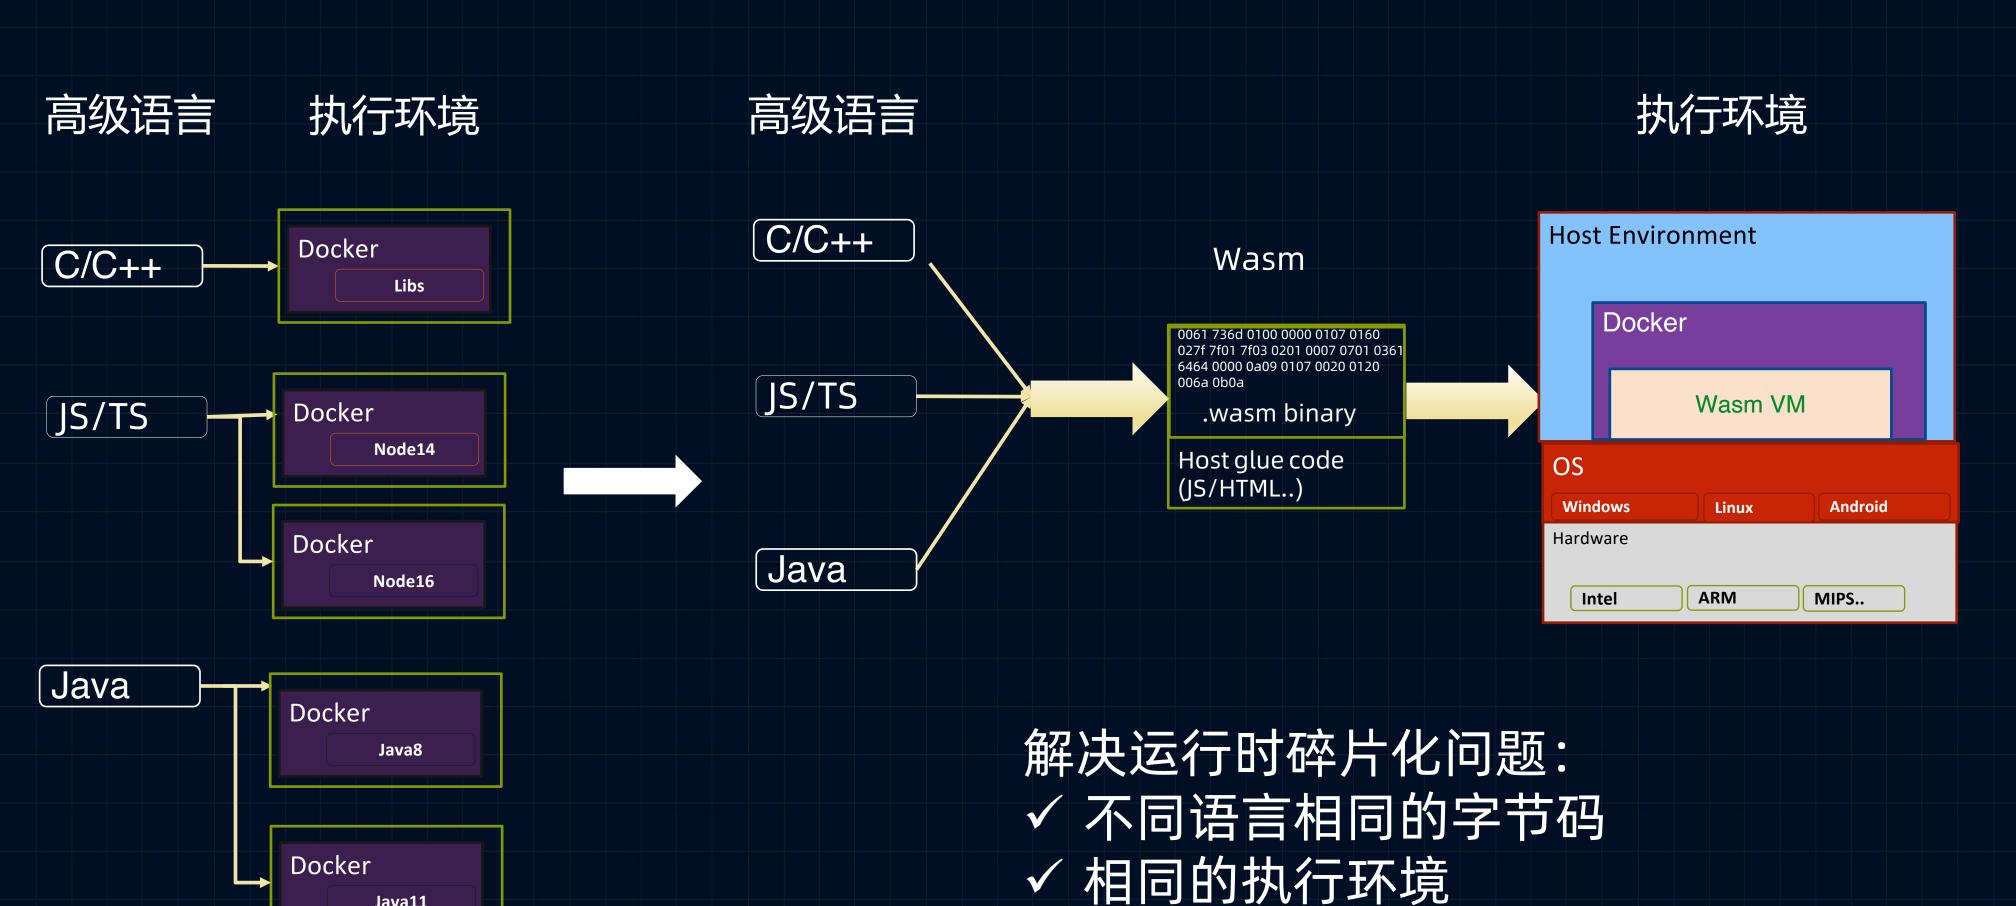

Java11

W-FaaS: Universal VM

W-FaaS: MultiTenant

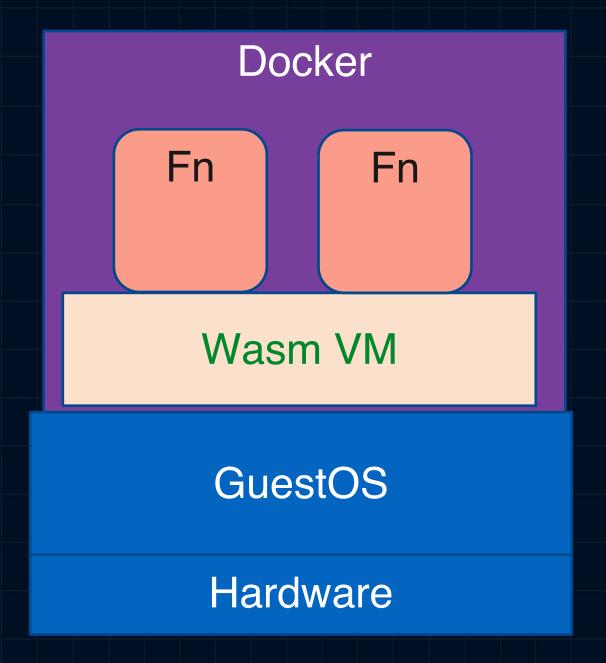

Wasm:

- ●消耗-100KB内
- ●启动-100us内

Docker Fn Fn VM VM GuestOS Hardware

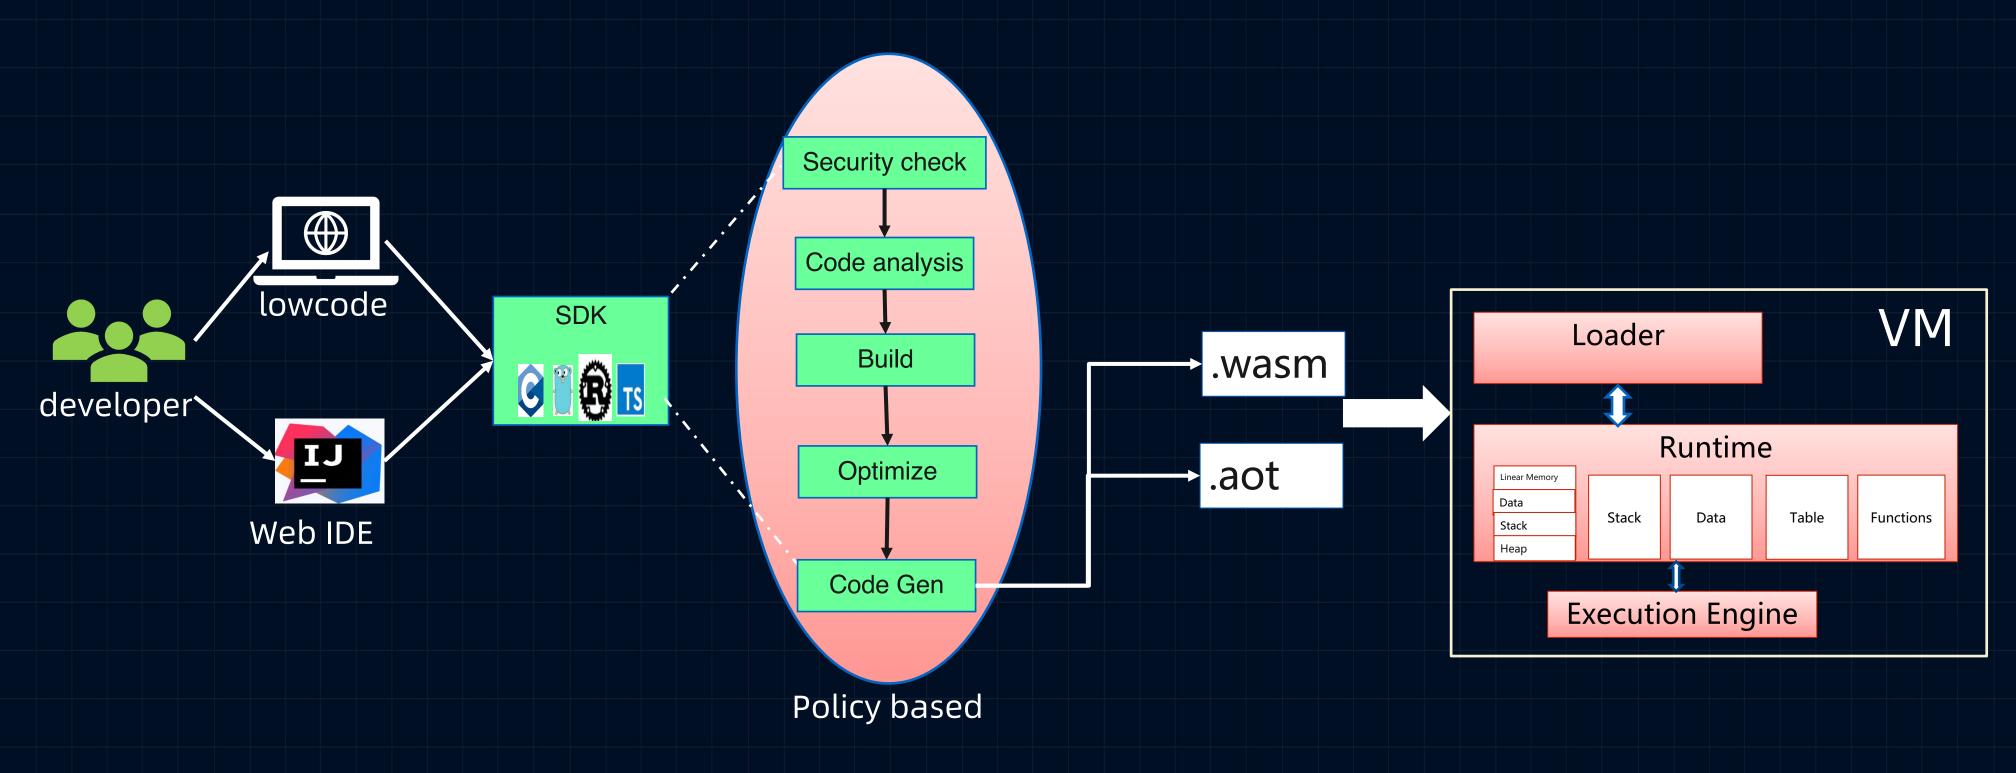

多租户:

- ●降低资源开销
- ●提升冷启动速度

W-FaaS: Compiler & VM Codesign

Summary

Thanks_
